

Identity Verification and Authorization Management System SafeERP Ver 6.0

Version 1.0

Sep 2026

Identity Verification and Authorization Management System

SafeERP Ver 6.0

Continuing our approach of continuous development and ongoing enhancement of our systems, BSE introduces the Identity Verification and Authorization Management System within the new release of SafeERP Ver 6.0, as part of our commitment to enhancing system security, protecting user accounts and their credentials, and reducing the risks of unauthorized access, hacking, or leakage of login data.

The Identity Verification and Authorization Management System provides the highest levels of protection for user accounts in line with global cybersecurity controls and standards to reduce the risks of hacking in all its forms. This release includes a set of advanced controls to manage the user login process to the system and protect accounts through the following features:

1. **Multi-Factor Authentication (MFA/2FA):** Adding an additional layer of protection to prevent access to the system in the event of a password leak, as login requires entering a changing activation code that is sent to the user via (Authenticator App - Email - SMS text messages).

App Authenticator

- The “MFA” verification method setting has been added at the user level.
- If the “APP” verification method is selected, a “QR Code” View button will appear, allowing the Admin to view and share the QR Code with the created user, enabling them to link their account to the authenticator app and use it for the verification process.
- When the button is clicked, the user’s QR Code will be displayed.

2. **Password Expiration:** Setting a time period for the lifespan of the password, to avoid using old passwords that may be vulnerable to leakage, and requiring the user to renew it periodically.
3. **Password Complexity:** Requiring a minimum password length and the inclusion of symbols, numbers, and letters, to prevent it from being predicted or guessed through automated programs.

🌈 (To activate the Secure Login feature and benefit from the new level of protection in SafeERP Ver 6.0, please contact the company's team or reach us through the company's contact numbers, and we will assist you in activating and configuring the feature according to your needs).
